Details

Description

The nozzle kit is an expansion kit for the Kärcher Rain System® and contains 5 drip collars, 10 sealing and spray collars (4x 90°; 4x 180°; 2x 360°) and 5 ground spikes. The drip and spray collars can be affixed at any point on the Kärcher Rain System® hose. Installation of the collars is fast, easy and does not require any tools. The integrated needle on the opened collar is simply stuck into the hose. Closing the collar fixes it securely to the hose. The water volume of the drip collar can be adjusted as required (0-10 l/h). The alignment of the spray angle can be adjusted horizontally and vertically thanks to the rotatable spray collar head. On the nozzle, the water volume can be adjusted from 0 - 55 l/h in order to save money and resources. Unnecessary hose holes can be resealed securely with the sealing collars. The Kärcher Rain System® works with max. 4 bar, combines the advantagesof micro-dipping and conventional watering and can be individually adapted to almost any garden.

Application

- Garden watering
- Flower beds, vegetable patches
- Individual plants
- Low-growing flowers
-

Features & Benefits

Extension kit for the Kärcher Rain System®

Extension of the Kärcher Rain System®

Water volume of the spray nozzles and drip collars can be adjusted

Targeted and need-based watering of plants.

Fixation on the Kärcher Rain System® hose

Flexible and precise mounting.

Collars with integrated needle

Installation without tools

Adjustable spray head with spray collars

Spray angle can be easily and optimally adjusted

Spray collars with different nozzle heads

Different spray angles for targeted watering

Resealable collars

Collars can be attached flexibly and removed according to requirements.

Ground spike with marking tool

Determine the optimal insertion depth

Ground spike with rubber ring for fixing

Kärcher Rain System® hose and soaker hose can be optimally fixed

Rubberised surface on the inside of the sealing collars

Secure resealing of collar holes in the hose
